

PROTOTYPE REPORT

RiskChain AI Wallet Threat Intelligence

A fullstack crypto wallet analysis prototype with Vite + React frontend, Express backend, and Etherscan-powered wallet records.

Generated: 5/28/2026, 10:17:57 AM

Sample wallet used for screenshots: 0x00000000219ab540356cBB839Cbe05303d7705Fa

Local prototype URL: <http://localhost:5173>

Prototype Screenshots

Landing and wallet input experience.

Scan Results Screenshot

Generated after submitting the sample Ethereum wallet address.

Feature Inventory

Wallet Lookup

- Ethereum wallet address input and validation.
- Backend API route for wallet scanning.
- Vite proxy support for local development.
- Production backend URL support for Vercel + Render deployment.

Etherscan Data

- Live balance lookup from Etherscan.
- Latest normal transaction records.
- Latest token transfer records.
- Transaction hashes, from/to addresses, values, dates, and token metadata.

Risk Dashboard

- Wallet overview with balance, activity, age, and status.
- Heuristic risk score and trust score.
- AI-style reputation, anomaly, sybil, whale, fraud, and MEV labels.
- Behavioral analysis and suggested security actions.

Analytics Panels

- Transaction analytics with incoming/outgoing ratios.
- Gas spend and largest transaction metrics.
- Recent transaction timeline.
- Token holdings and contract interaction summaries.

Security Modules

- Approval risk panel.
- Scam and phishing risk indicators.
- Contract interaction footprint.
- Recommended actions and high-risk warnings.

System Notes

- Raw Etherscan records are actual API data.
- AI/risk sections are app-generated estimates, not verified Etherscan facts.
- Backend rate-limits Etherscan calls to avoid the 3/sec error.
- Browser console logs the full wallet API response for inspection.
